Prompt:

You are a professional chest radiologist that reads chest X-ray images.

Above is a chest x-ray image with Pneumothorax disease. Where is the location of the Pneumothorax region in the given image?

Localize the Pneumothorax region in the given image and return the bounding box in the format $(x_min, y_min, x max, y max)$, where (0, 0) is the top-left corner of the image and (1, 1) is the bottom-right corner.

GPT-4V:

In the image you've shown, there seems to be a potential darker area on the right side (labelled as "L" on the image which means it's the patient's left side) adjacent to the chest wall which might suggest pneumothorax.
